

AS 9100:

ELEVATE YOUR AEROSPACE MANUFACTURING STANDARDS

AS 9100 is a widely recognized and standardized quality management system for the aerospace industry. While ISO 9001 sets the foundation for quality management systems across various industries, AS 9100 elevates these requirements specifically for aerospace, ensuring the utmost in safety and quality. This rigorous standard not only ensures products are up to par but also integrates the complete supply chain from the assembly line to in-flight operations.

POTENTIAL BENEFITS

By adopting and getting certified in AS 9100, manufacturers can:

- **Boost Efficiency:** On average, companies have reported a **20% improvement** in operational efficiency after implementation.
- **Reduce Rejections:** Decrease product rejections and rework by up to **30%**, saving costs and increasing output.
- **Expand Market Reach:** Gain a competitive edge and enhance the potential to secure international contracts, leading to an estimated **15% increase** in market reach.

Why Partner with TMEP:

Expertise & Guidance:

With TMEP, you're not just adopting a standard. You're gaining a partnership that offers in-depth knowledge and guidance every step of the way.

Custom Solutions:

Every aerospace manufacturer is unique. TMEP provides tailored solutions that match your specific needs, ensuring seamless integration and maximum benefits.

Continuous Support:

Our commitment doesn't end with certification. With TMEP, you get ongoing support to ensure sustained compliance and constant improvement.
