EMPOWER YOUR WORKFORCE:
TRAINING WITHIN INDUSTRY
JOB INSTRUCTION

TWI JI, OR TRAINING WITHIN INDUSTRY - Job Instruction, is a foundational element of lean manufacturing and a structured method to quickly train employees to do a job correctly, safely, and conscientiously. The JI program emphasizes the importance of hands-on learning and breaks down jobs into closely defined steps, key points, and reasons for those key points. This ensures that every worker can perform their tasks uniformly and to a consistent standard, minimizing variability and enhancing productivity. The goal of TWI JI is not just to instruct but to create a culture where every worker can become a skilled instructor.

POTENTIAL BENEFITS

- **Reduce Training Time by up to 75%:** Standardized and effective training methodologies ensure rapid onboarding and skills acquisition.
- **Decrease Defects by up to 60%:** Uniform instruction leads to consistent work output, drastically minimizing errors.
- **Enhance Worker Flexibility:** With a robust training foundation, workers can quickly adapt to new roles or tasks as required.

- **Boost Employee Confidence:** Workers trained under JI methods have a clearer understanding of their roles and responsibilities, leading to increased confidence and job satisfaction.
- **Promote Knowledge Retention:** The structured breakdown of tasks ensures that knowledge is retained and passed on effectively.
- **Strengthen Team Cohesion:** Shared training methods promote a common language and understanding among team members.

WHY PARTNER WITH TMEP?

Legacy of Learning:
TMEP combines traditional TWI JI principles with contemporary instructional methodologies, ensuring timeless techniques meet today's challenges.

Beyond Just Training:
Our approach to JI isn't limited to task instruction. We focus on nurturing in-house trainers, ensuring knowledge proliferation across your organization.

Real-time Feedback Loop:
TMEP emphasizes the importance of immediate feedback during the training process, refining instruction methods in real-time for maximum effectiveness.
